

MOR, Inc Qualifications

Managed Organic Recycling, Inc. has five years experience in the planning, design, equipment supply and operational consulting with the covered aerated static pile composting technology. Our initial pilot study was in 2006 for the Central Valley Water Reclamation Facility which recently commissioned its Oquirrh Mountain Composting Facility in Salt Lake City, UT. This ultimate capacity this facility will handle 100 wet tons of anaerobically digested wastewater organics per day (160,000 yd³/yr of feedstock and bulking agent). The initial feasibility study included a finished product demands assessment as well a financial return on investment (ROI) analysis.

MOR has completed pilot/demonstration studies for:

- Soil Key in Tenino, WA (2007)
- NorCal Waste Systems, Dixon, CA (2007)
- South Utah Valley Solids Waste District (2008)
- Timpanogos Special Service District, American Fork, UT (2009)
- Napa Recycling, Napa, CA (2010)

Currently, we are collaborating with Liberty Composting (Lost Hills, CA) and City of Bakersfield, CA on VOC and odor emissions studies.
